PRESS RELEASE

June 2007

Advances in chromatography column supports

To meet industry demand, Porvair Technology have advanced chromatography column supports through the development of frits composed of BioVyon[®], a new ultraclean porous polymer. BioVyon[®] frits, suited to SPE and process scale applications, exhibit a wide range of chemical compatibility and have hydrophobic and oleophobic properties to control liquid flow whilst retaining inertness.

“We’re responding to better performances required in sample preparation and this is reflected in new material development” says Roy Rigby, Market Manager.

Porvair Technology is a division of the Porvair Filtration Group, a specialist porous media and filtration company, with expertise in a wide range of media and many years experience in filtration. The Porvair Filtration Group designs and manufactures high performance filters for the most demanding environments in industries including aerospace and defence, chemical process, power generation, oil and gas, pharmaceutical and healthcare, air and water.

For further details please contact Roy Rigby on 01978 666247 or email info@porvairfiltration.com
