Press Release: 3rd April 2009

Porvair Filtration Group announces a new, over \$2 million contract

Porvair Filtration Group, a specialty porous materials and filtration systems company, has been awarded a contract worth in excess of \$2 million to supply metal filter elements for the Integrated Waste Treatment Facility (IWTU), part of the U.S. Department of Energy's Idaho Cleanup Project. The IWTU will treat 900,000 gallons of liquid radioactive waste stored at the Department of Energy's Idaho site.

Porvair Filtration Group's Microfiltrex Division will supply filter elements in Inconel sintered powder, Inconel pleated sintered metal fiber, and stainless steel fiber for application in four filtration applications of the treatment process. The IWTU will use THOR Treatment Technologies' steam-reforming treatment technology to convert the liquid radioactive waste into a dry, solid particulate product for final disposal.

The Porvair Filtration Group, based in Hampshire, United Kingdom, is an acknowledged world leader in the development and manufacture of specialist porous materials and filtration systems. With over 150 years of accumulated experience in filtration and separation, the Group designs and manufactures high performance products and systems for the most demanding applications and environments.
