PRESS RELEASE

December 2006

Rapid response to web enquiry results in trial order for desalination filters from Microfiltrex

Leading on from huge success with portable filtration units for cryptosporidium removal for the MoD Navy, Microfiltrex is pleased to announce a trial order for absolute-rated filters for a desalination plant on two commercial liners. An Australian OEM manufacturer of SWRO desalination plant left a web enquiry at www.porvairfiltration.com to retrofit an existing application for a 5 micron depth cartridge filter.

The Microfiltrex Polyfil II filter meets the customer specification of 62% organic removal at 1000 litres/minute on shipboard desalination plants on the liners the P&O Pacific Sun and Pacific Star. Further orders are planned for other ocean-going liners including a new 70 000 tonne liner due to be launched next year. This new customer has Australian government TRADEX registration and was pleased with the quick response to their web enquiry and rapid fulfilment of their first order.

Microfiltrex is a division of the Porvair Filtration Group, a specialist porous media and filtration company, with expertise in a wide range of materials and many years experience in filtration. The Porvair Filtration Group designs and manufactures high performance filters and filtration systems for a wide range of industries from aerospace and defence to the biosciences, chemical process and power generation.
