## **PRESS RELEASE**

*July 2004*

### **Steam Filtration for the Process Industry**

Microfiltrex based in Fareham, offer a range of steam filters that provide fine filtration to the food and beverage and pharmaceutical industries. Their high flow steam filters prevent blockage and contamination of sterile equipment increasing process efficiencies. All 316L stainless steel construction and inert up to recommended temperatures of 200°C. High quality steam (1 micron filtration) to prevent contamination of products.

These steam filters have exceptional high flow rates, high dirt holding capacity and are all welded construction, giving protection of sterilising equipment and ensuring long on stream life. Available in sintered powder, woven mesh and metal fibre with a full range of complimentary industrial or sanitary housings. Ideal for use in bottling halls and autoclaves, food production, breweries and hospitals.

Microfiltrex is a division of the Porvair Filtration Group, a specialist porous media and filtration company with expertise in a wide range of media and many years experience in filtration. The Porvair Filtration Group designs and manufactures high performance filters for the most demanding environments in industries including aerospace and defence, chemical process, power generation, oil and gas, pharmaceutical and healthcare, air and water.

For further details please contact Christine Chapple, Microfiltration Sales Engineer on tel : 01329 228161 or email [info@porvairfiltration.com](mailto:info@porvairfiltration.com)
