

Pharmaceuticals: Sterile API

porvair
filtration group

We manufacture a range of innovative, high performance, cost effective filters specifically designed for each stage of the pharmaceutical manufacturing process.

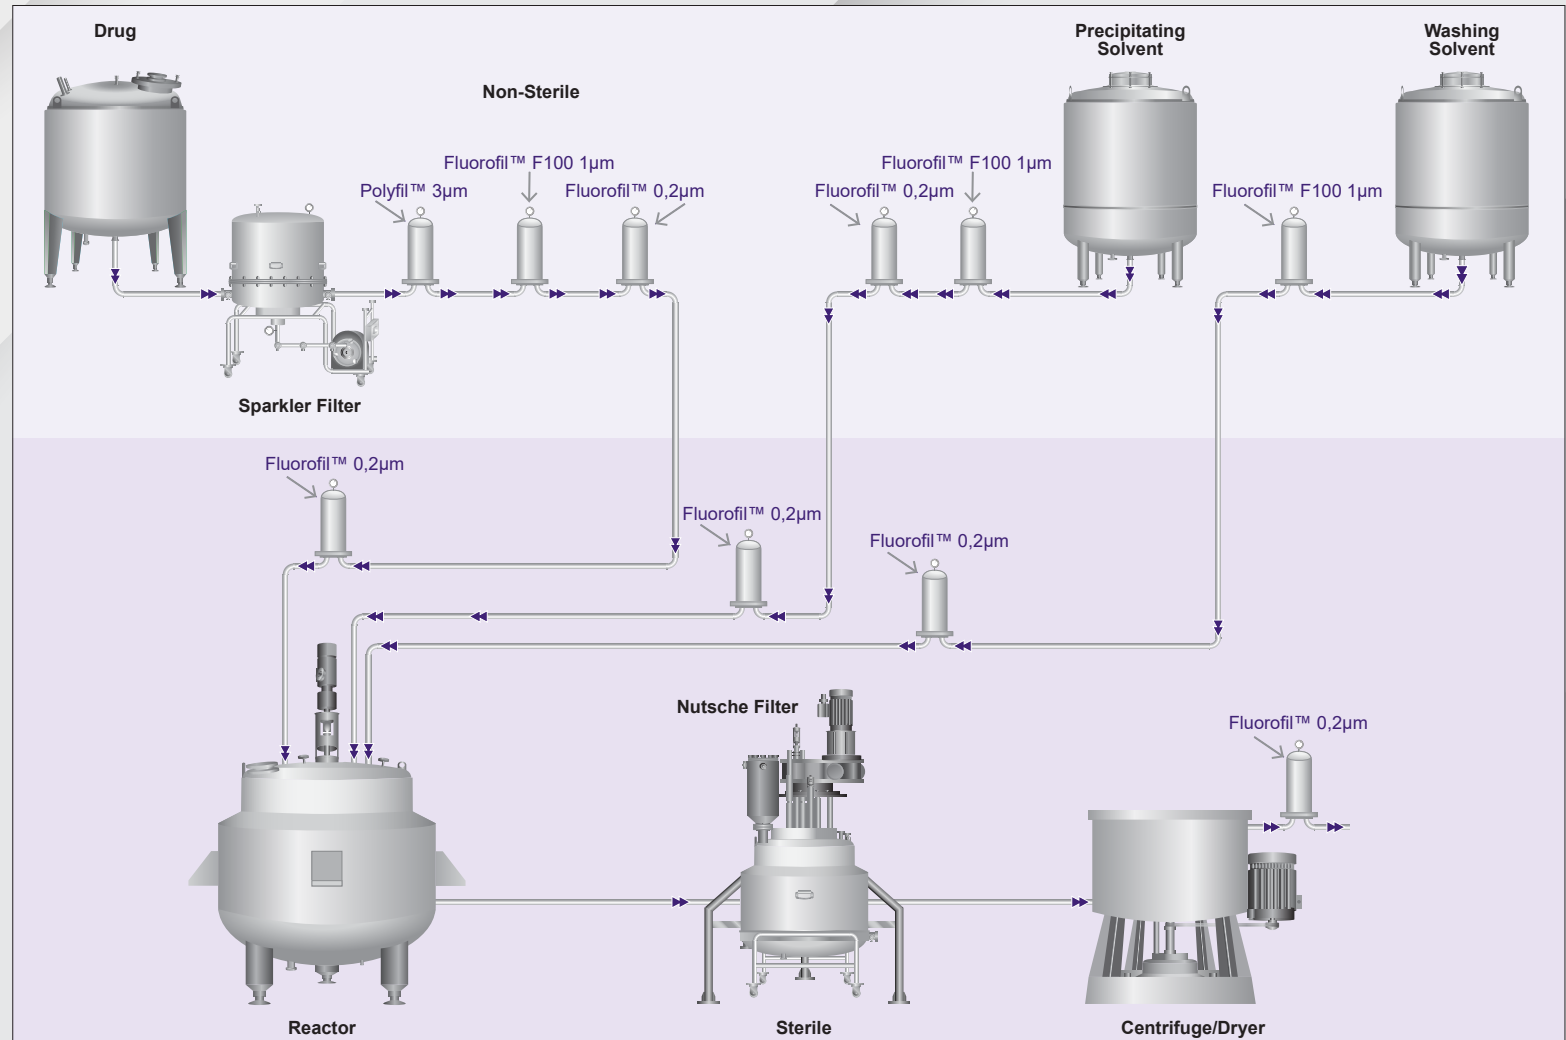

Sterilisation is critical in the manufacture of Active Pharmaceutical Ingredients (APIs).

Sterile APIs intended for use in parenteral products must also meet relevant specifications for pyrogen or bacterial endotoxins.

Our polymeric cartridge filters are constructed from FDA-approved materials carrying the CFR 21 number for biological safety and materials of construction meet USP Class VI-121°C plastics.

Our range of validated microfiltration pleated and depth filter cartridges include:

- clarification filters
- microbial stabilisation filters
- sterilising filters
- bioburden reduction filters
- vent filters
- gas filters
- industrial housings
- sanitary housings
