Integrity Testing

Each BiofilTM 3 Plus module of every cartridge is individually integrity tested using the Diffusive Flow Test, which correlates to the HIMA and ASTM F838-20 bacterial challenge tests. Non-destructive integrity tests, such as Pressure Hold, Diffusive Flow and Bubble Point, can be performed by customers. Please contact us for procedural detail.

Filtrate Quality

Cartridges have been validated to give high levels of effluent cleanliness, in accordance with USP guidance for:

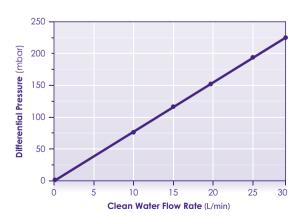

- Extractables
- TOC & Conductivity
- Particulates & Non-Fibre Release
- Bacterial Endotoxins

Please refer to the Biofil $^{\text{IM}}$ 3 Plus Validation Guide for full supporting data.

Clean Water Flow Rates

- Typical clean water flow rate:
 A 254mm (10") Biofil™ Plus single cartridge exhibits the flow-∆P characteristics indicated below, for solutions with a viscosity of 1 centipoise.
- Other solutions:

For solutions with a viscosity of greater than 1 centipoise, multiply the indicated differential pressure by the viscosity in centipoise.
